**A. E. MICHAEL'S,**  
A GOOD PLACE TO TRADE.

### Calendar.

- October.  
31—Hallowe'en party at local school, by High School students.  
31—Dance, Ducholka's Hall, by Rifle Club.  
31—Lugs M.D. Councilors meet at Edmonton Beach.  
Nov. 1—Shoot at Comet Ranges.  
3—Methodist Ladies Aid meet.  
10—Thanksgiving Day.  
14—Voting on Stony Plain's Electric Light Bylaw.  
16—Ladies Aid Annual Bazaar.

### On the Side.

E. H. Pidgeon has been appointed a "commissioner for cattle" possibly in preparation for the next meeting of Lugs M.D., when a clash is expected between the warring parties in division two.

'Tis much better to stop at the crossing and wait if you want to, than to have the Coroner poking around to see where the locomotive struck you.

No Clarens, it isn't true that the pressman sleeps on the bed of the press.

Ad. in Ransom [Kansas] paper: "For sale, a horse by a widow woman slightly spavined but still good for plowing."

### Pete Smith Goes to the Pen.

The Hon. Peter Smith and Emilus Jarvis Sr. (head of the brokerage firm of Emilus Jarvis) were on Friday last in Toronto found guilty of conspiracy to defraud the Province of Ontario.

Smith was sentenced to serve three years in the Penitentiary.

Jarvis was given six months in the county jail.

In addition both men must remain in prison until a fine of \$600,000 is paid.

Mr. Smith was Provincial Treasurer in the former United Farmer Government in Ontario, and was a very prominent figure in church circles in his home town.

### Ladies Aid to Meet

Members of the Ladies Aid Society in connection with the Methodist Church will hold the regular meeting at the home of Mrs. J. H. Lory on Monday evening, Nov. 3, at 8 p.m. This takes the form of "A Novelty Evening," each person to bring a novelty gift as the admission fee to a jolly evening.

### Stony's Annual Bazaar.

The annual bazaar, sale of fancy work, aprons, children's dresses, knitted articles, etc., will be held on Saturday, Nov. 15th.

Ten, sandwiches and cake will be served all afternoon during the sale.

The Ladies Aid suggest that you take this opportunity to buy nice handmade useful articles for your Christmas gifts.

Prices reasonable. Place of sale to be announced later.

### Paterson Committed for Trial

Alleged to have attempted to obtain a check for \$1000 by false pretences from the grain firm of Randolph G. Mitchell, Winnipeg, Fred C. Paterson appeared before Magistrate McLeod in Edmonton on Monday and was remanded for trial at the next sitting of the Criminal Court. Paterson was also charged with falsifying a document.

This is the man, giving the name of W. B. Swann, who was captured in Stony on leaving the postoffice, where he is said to have inquired for the letter containing this check. Officer Smith and Postmaster J. Foerster were witnesses at the hearing on Monday.

### LOCAL NEWS.

Miss Elaine Lawton, Edmonton, was a week-end visitor with Mrs. Murd McKinlay.

Miss Burney, Edmonton, was visiting this week with her sister, Mrs. Larson, at Holborn.

Measrs Ursel, E. C. and Geo. Schnideck intend going in to the Foothills on a trapping expedition.

Mrs. John Eichenlaub was taken to the Misericordia Hospital yesterday for treatment.

Herr "Rudey," Heichen is now in charge of the Gillespie elevator at Penn.

Mr. Jack McCulla is in Vancouver.

Dick Timm left on Sunday for the coal mines at Wayne.

His many friends in this district will be pleased to hear Mr. R. Spilsted, formerly a popular banker at Stony, has been appointed manager of the North Star Grain Co. at Edmonton.

Oppertshauser & Sons have installed a splendid Radio-receiving outfit at their store, and are now agents for the Westinghouse Co.

The Ladies Aid in connection with the Lutheran church held a meeting on Thursday at the home of Mrs. Armbruster.

The Ladies Aid of the Methodist Church held a very successful sale of home cooking and candy on Saturday last, everything being sold out before closing time.

A "corrected notice" in the last issue of the Alberta Gazette shows that the "N.E. Qr. 36 52 28 W4, was added to the M. D. of Spruce Grove No. 519." This is the land on which Mr. Carl Goetz Sr. resides.

The program committee of the High School Lit. has arranged a very nice program of games and other amusements for the party at the school tomorrow night.

While some work was proceeding at the blacksmith shed at the Sinner ranch on Friday afternoon, a spark set fire to the structure, which adjoins the windmill. On account of the high wind, some apprehension was felt for the safety of the nearby barns. A SOS message was sent to Stony, and Johnny Miller responded with a carload of volunteers. The flames were confined to the one building, and the loss is not serious.

Dear Sir: I read your article in last week's paper with interest about the hurry some farmers and threshers were in this fall to get threshing. One instance is given of a hurry-up thresher in the Glory Hills district whose machine was going so fast a pulley flew off. "Flow off" is right, as this one flew so far it required a man on horseback to go after it.

## GET IT at HARDWICK'S.

## A False Conception Of Values

Attention has been drawn recently in the press of Eastern Canada to the case of Dr. Saunders, of the Dominion Experimental Farms, who developed Marquis wheat. About thirty years ago Dr. Saunders began experimenting in an effort to produce a type of wheat possessing the milling qualities of the old Red Fife, but as more adaptable to productive growth in Western Canada. Marquis wheat was the result. The development of Marquis wheat has added hundreds of millions of dollars to the wealth of Canada, and has been a large contributing factor in placing this Dominion in the front rank of wheat producing countries. It means millions of dollars annually to the farmers of Canada.

As director of Experimental Farms, Dr. Saunders was in receipt of a very modest salary. It was not a salary from which he could make substantial savings against his old age, nor enable him to make large and profitable investments. It constituted a fair living, and that is all. Dr. Saunders has now retired from active service and he is allowed a superannuation allowance of a little over twenty dollars a week.

Yet people frequently express surprise because men of genius and ability do not enter the public service of their country and give to the country at large the benefit of their investigations, discoveries and inventions instead of entering the service of some large private corporation.

Suppose Dr. Saunders, instead of giving the results of his work to Canada at large, had been employed by a private corporation, and had developed for them something which meant tens of millions of dollars profit, does anyone imagine that corporation would have paid him a bare living wage and in his old age given him a pittance of a few dollars a week, not sufficient to maintain himself in comfort in these days. On the contrary, he would have commanded a salary running into five figures.

If Dr. Banting, the discoverer of insulin treatment for diabetes, had kept that discovery to himself and patented it for commercial sale, he would already be a very wealthy man. But Dr. Banting's discovery was patented solely to control the product, keep it up to standard, and in order to prevent it being commercially exploited. It is being made available to suffering humanity as close to actual cost as possible. And Dr. Banting refused an offer of hundreds of thousands of dollars to leave Canada and go to the United States to continue his great work.

But all men are not actuated by the same high ideals of public service as Dr. Saunders and Dr. Banting. Therefore, if the Government and people of Canada are to benefit from the services of well qualified experts in their particular professions or lines of business and industry, they must be prepared to pay for their services commensurate to what private corporations will gladly give. It is because the Government and people of Canada have not yet awakened to this truth that we read almost every day of some Canadian, prominent in some walk of life, having left the Dominion for the United States where he has accepted some important and highly remunerative position. Thus is Canada losing not merely population but brains and ability amounting to genius which is helping to further develop and add to the prestige and wealth of the United States, but which should be doing these same things for Canada.

Many men and women in Canada today are giving all their abilities and energies in public and semi-public service in exchange for small salaries. They are doing so because of love of country and the work in which they are engaged. What will happen to them when old age comes they sometimes contemplate with a shudder. Yet it is the exception and not the rule when these men and women are not the subject of carping criticism on the score of the slight remuneration they do receive by people who may have contributed a dollar or two to the prosecution of the work in which these others are devoting their whole lives without thought for the future. But there would be no such criticism of these same men and women if they devoted their abilities and energies in private business and amassed wealth for themselves at the expense of the public. The public pays whether it is large profits and accumulated wealth in the private business, or in salaries for public and semi-public service rendered. If all comes out of the pockets of the public at large.

The public conscience of this Dominion needs an awakening to true values in service. Because of false conceptions now so prevalent, this country is being held back, its development arrested, its progress regrettably slow when it ought to be amazingly rapid and the envy and admiration of the world.

### Chinese Adopts Indian Orphan

In British Columbia, according to reports, the Chinese have had a strong feeling against the Indians, refusing to attend school where the teachers may have a touch of Indian blood. But a recent incident may change the feeling, an Indian orphan girl having been adopted by Chow Wing, Chinese merchant, and his wife, at Vancouver.

### Musical of Ancient Babylon

Babylonian hieroglyphics which reveal a complete musical composition have been deciphered by Prof. Curt Sachs of Berlin University. This is said to be the first time that the modern world has been given the music of ancient Babylon. The composition is similar to the Chinese tunes, Prof. Sachs says.

## Children Cry for Fletcher's CASTORIA

**MOTHER—Fletcher's Castoria** is a pleasant, harmless Substitute for Castor Oil, Paragoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of *Dr. H. H. Fletcher*. Proves directions on each package. Physicians everywhere recommend it.

### Germany May Build Zeppelin for France

Scheme Would Postpone Dismantling Of Works For Two Years

A scheme which would postpone the dismantling of the Zeppelin works at Friedrichshafen, Germany, for at least two years, and by which the construction of another giant dirigible, similar to the ZR-3 which was delivered to the United States by a trans-Atlantic flight would be made possible, is described in *Le Journal*, Paris.

A French company which has purchased patent rights from the Zeppelin Company with the intention of using them for commercial dirigible lines, according to the newspapers, has suggested that the Zeppelin Company build another ZR-3 for France to be considered on the reparation account.

The German Government is understood to favor the scheme which will be put before the reparation commission.

### NEW STRENGTH FOR WEAK STOMACHS

Indigestion Disappears When the Blood is Restored

The urgent need of all who suffer from indigestion is a tonic to enrich the blood. Pain and distress after eating is the way the stomach shows that it is too weak to perform the work of digesting the food taken in. In this condition some people foolishly resort to purgatives, but these only further aggravate the trouble.

New strength is given weak stomachs by Dr. Williams' Pink Pills for the blood, and it accounts for the speedy relief in stomach disorders that follow the use of Dr. Williams' Pink Pills. The pills are completely restorative and can be taken without discomfort and the burden and pains of indigestion are dispelled. Miss Mollie Averil, Chas. Williams, Mass., proves the value of these pills in cases of this kind. She says: "Some years ago I had a terrible attack of stomach trouble. My stomach rejected all food and I could not even keep down the lightest custard. I tried some tablets recommended for dyspepsia, but they did not do me a particle of good. I finally went to a doctor; but with no better results. By this time I had changed from a robust healthy girl to a complete skeleton, losing flesh daily. Then my parents asked me to try Dr. Williams' Pink Pills and I began their use. After taking them for a short time I began to feel better and continued the treatment until I was completely restored to health. Since, on rare occasions when I have felt the need of a tonic, I turn to Dr. Williams' Pink Pills and they never disappoint me. Most members of our family have at one time taken the pills with good results, so I now always recommend them to all in need of a reliable tonic."

You can get these pills from any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

**Insects Like High Temperature**

If you suffer from the heat, consider the plight of the desert bug. "Insects in the deserts of Palestine are active and cheerful when the midsummer sun raises the temperature of the sand to 140 degrees Fahrenheit, according to recent researches of the Royal Society.

Health cannot be looked for in the child that is subject to worms, because worms destroy health by creating internal disturbances that retard development and cause serious weakness. Miller's Worm Powders expel worms and are so beneficial in their action that the systems of the little sufferers are restored to healthfulness, all the discomforts and dangers of worm infection are removed, and satisfactory growth is assured.

### Sockeye Salmon In Lake Ontario

Experiments Carried Out Give Promise Of Success

The Pacific salmon of the sockeye family, so valuable to canners, has been brought to Lake Ontario and successfully launched into fresh water. Years of experiment have shown that the fish have grown and flourished in their new environment. Fully matured sockeye have been caught in Lake Ontario during the past season.

The value of the innovation is obvious in considering the desirability of a salmon-canning industry in Ontario. The work has been going on for six years and an average of 200,000 young sockeye have been released in Lake Ontario each year.

### Minard's Liniment Relieves Neuralgia

A farmer of Foxboro, Massachusetts, John Ashley, raised a crop of 30,000 bags of strawberries on a four-acre tract of land this past season.

### Another Theory About Lightning

Caused By Two Kinds of Electricity Coming Into Contact

The latest accepted theory about the cause of lightning is based on experiments conducted in India by Dr. George C. Simpson. Simpson's explanation starts with the fact, previously determined by laboratory experiments, that when drops of water are broken up there is a separation of negative and positive electricity. This process occurs on a large scale in thunderstorms, where the falling raindrops are broken before they reach the earth by the powerful uprushes of the clouds. The two kinds of electricity have a tendency to remain in the drops, while negative electricity is carried aloft by the rising air and eventually gives a strong negative charge to the higher parts of the clouds. The positive electricity, however, has a tendency to remain in the drops, while negative electricity is carried aloft by the rising air and eventually gives a strong negative charge to the higher parts of the clouds. The positive electricity, however, has a tendency to remain in the drops, while negative electricity is carried aloft by the rising air and eventually gives a strong negative charge to the higher parts of the clouds.

From the currents induced in transmission lines by lightning discharges at known distances from the lines, it has been estimated that the voltage of an average lightning flash is about 100,000,000 volts. Rough estimates have been made as to the strength of current in lightning, giving values ranging from 10,000 to nearly 100,000 amperes.—Motor Magazine.

### Minard's Liniment Used by Physicians

The aerial mail service has become so popular in Germany that boxes for small intended for air routes have been placed on the principal streets of Berlin. Formerly it was necessary to carry to the post office mail for the airplane.

### Relieves Asthma at Little Expense

Thousands of dollars have been vainly spent upon remedies for asthma and seldom, if ever, with any relief. Dr. J. D. Kellogg's Asthma Remedy, despite its assurance of benefit, costs so little that it is within reach of all. It is the national remedy for asthma, far removed from the class of doubtful and experimental preparations. Your dealer can supply it.

### Toy Banks in Germany

Savings banks for Germany children in the form of toys have come as a reminder that the days of the inflation period have passed. Children are encouraged to save by their parents, for the municipal saving institutions pay interest ranging from 8 to 15 per cent.

### Wonderful New Airplane

Britain claims the most wonderful new airplane ever built, a biplane with a wing span of seventy feet, and three decks, one above the other. The plane is reported to have been especially designed to carry the largest naval torpedo built, and its motive power is a 1,000-horsepower Napier engine. Its speed will average 120 miles an hour, with 150 for extreme use.

### She Got Relief From HEART TROUBLE

By Using MILBURN'S HEART AND NERVE PILLS

Mrs. Geo. E. Bowman, Morrisburg, Ont., writes:—"I am writing you a few lines to let you know of my experience with Milburn's Heart and Nerve Pills."

Two years ago I became very poorly with my heart and nerves and whenever I took the least little bit of exercise my heart would start to jump and flutter.

I could not walk up stairs without having to sit down and rest before I was half-way up, on account of my breath becoming so short."

I commenced taking Milburn's Heart and Nerve Pills, and in no time I felt a great improvement and can now heartily recommend them to all those who are troubled with any affection of the heart."

Milburn's H. & N. Pills are for sale at all drug and general stores; put only by The T. Milburn Co., Limited, Toronto, Ont.

The trustful telephone takes anybody's word after the coin has dropped.

Many mothers can testify to the virtue of Mother Graves' Worm Exterminator, because they know from experience how useful it is.

### Owes Good Luck To Whiskers

Bobbed or not bobbed—mildly may do as she likes—but no one will ever catch Captain N. Narita, skipper of the Japanese liner Seattle Maru chopping his whiskers. He landed in Los Angeles harbor the other day, and complacently laid his twenty-five years' sailing the seas without mishap to the length and luxuriance of his whiskers, which, he alleges, have brought his unabated good luck.

## Coal Mines Of Alberta May Offer A Solution Of Eastern Canada's Fuel Problem

In a recent issue, says the Natural Resources Bulletin, the part played by Welsh and Scottish immigrants in helping to make Central Canada independent of foreign fuels was dwelt on. These immigrants, it is pointed out, have been able to deal with the situation that our own coal fields can provide in solving the problem presented by the "acute fuel area." One of the possible sources of a Canadian coal supply for Ontario and Quebec is the province of Alberta and it is with the possibilities and problems of this source that the present article deals.

Alberta has immense resources of coal. The problem is how to get it to the west coast of the Great Lakes. It is not far enough to enable it to compete with coal from the nearby United States. In fact, the province contains seventeen per cent. of the coal resources of the world, and about eight per cent. of the coal resources of Canada. (D. B. Dowling, of the Geological Survey of Canada, in "The Coal Resources of the World," has estimated that Alberta contains an actual reserve of over 245,000 million tons, and a probable reserve of about 474,000 million tons. This makes a total reserve for the province of considerably over 1,000,000 million tons.)

A close geological study of the Drumheller area, one of the principal producing areas of Alberta, shows that it alone will be equal to the needs of many future generations. The yield, it is estimated, will amount to approximately 1,200 tons per acre foot with an aggregate of ten feet of workable coal over at least 6,000 acres. Geologists estimate the "reserves" amounts to nearly 100 million tons.

With reserves such as these, it may be confidently predicted that coal mining in Alberta is only in its infancy. The industry began in 1881 when coal was dug from the banks of the river at Lethbridge. A little later a mine was opened at Anthracite on the main line of the C.P.R. from which coal was obtained for the use of locomotives and boilers in connection with the heavy construction work involved in building that railway through the Rocky Mountains. From this small beginning the industry has grown till today there are 380 mines in operation, producing in the neighborhood of 6,000,000 tons per annum, and giving employment to over 8,500 persons.

The problem of the mine in Alberta has been to find markets for the large tonnages which it is possible to produce. Post-war conditions and labor troubles in the United States in recent years have so increased the cost of United States anthracite, the fuel which has until lately monopolized the market in Central Canada, that an opening was created for the Alberta product in this position. Experiments in shipping coals were made to Ontario and the public was convinced that Alberta coal was a most desirable domestic fuel. Freight rates were high, however, and the question was, could it compete with United States anthracite when conditions across the border became normal.

Last year the Canadian National Railway cut their rate temporarily on coal from Alberta to Ontario to \$1 a ton in an effort to encourage and popularize the use of the Great Lakes. The continuation of this low rate, it was intimated, was conditional on the operators likewise reducing their rates in order to extend the market. Unfortunately, production costs due to the large number of mines operating only a part of the year and the ease with which new mines can be opened when demand increases, have always been comparatively high. This season further complications have been introduced into the problem by serious labor troubles. In the Drumheller district, for instance, the output for March was only 35 per cent. of normal. Of 22 mines only 2 worked continuously and these were forced to shut for two or three days per week during the first three months of the present year. In District No. 18, one of the large producing districts of Alberta, the operators claim that "wages amount to 65 per cent. of the cost of production." The result has been that, due to these causes and also in part to the short season during which the mines

are operated, high production costs have continued.

This situation has given United States coal a chance to enter upon the market west of the Great Lakes. A market in which Western Canadian coal ruled supremacy during and immediately after the close of the war. This area which now imports around 2,000,000 tons annually, is a natural preserve for Alberta and Western Canada coal. United States coal interests, however, are making a strong bid for it, and they have the advantage not only of being highly organized but also of favorable transportation to the head of the lake in bulk rail running, there for export, of grain. When the navigation season is closed by winter this coal is hauled west from Port Arthur and Port William—extra freight in grain cars, that would otherwise have to return empty.

While Alberta has all the natural facilities for developing a large and profitable coal mining industry it is apparent that some radical changes will have to be made in organization before the industry can be its own. Over-development is probably the chief trouble today, and some system is needed for regulating the opening up of new mines until there is an assured market for the output. The productive capacity is four times the demand, so there is a problem also of getting more markets. The Central Canada market, together with the one west of the west of the Great Lakes, are natural selling fields, and there are prospects too for developing a market in Vancouver and Seattle for bunkering of grain cargo ships. As soon as Alberta coal can be placed on these markets on a sound economic basis there is little doubt there will be an effective demand.

### Timberland In The North

Vast Areas Covered With Good Growth Of Jack Pine

Having completed a tour of the Northern portions of Saskatchewan and Alberta from The Pas in Manitoba to Fond du Lac at the eastern end of Lake Athabasca in Alberta, R. H. Segre, Dominion land surveyor, arrived in Calgary, recently from Edmonton, after having completed one of the most interesting traverses carried out in the north this year by government parties. This route was largely traversed in 1925 by J. R. Tyrell, of the Dominion geological survey at that time, now a prominent engineer in Ontario.

Mr. Segre said the most interesting feature of the journey to him was the fact that, whereas Mr. Tyrell reported that in 1925 a large part of the country travelled was barren of trees, it is now covered with a good growth of Jack Pine. "Most of the Jack pine," said Mr. Segre, "appears to be about 30 years old, and there are occasional stands of spruce about 20 years in diameter. It goes to show the possibilities of the country in timber resources if not destroyed by fire. This timber is at the stage already, where it will form a supply of pulpwood and as a reserve for pulpwood when other limits become exhausted, is of inestimable value."

### Farmers Use Header

System Effects A Saving In Labor And Material

In the territory west of Saskatoon the header is being substituted for the self-blinder, the grain being elevated into closely built racks or boxes from the header, and then transported to a point and stacked. The farmers are using ventilating stacks and the grain is drying in the stack perfectly. It is claimed that this system will improve the sample of wheat by two per cent, and that there is less decay due to chaff and weeds, etc. It is also claimed that this system increases the capacity of a threshing machine by about 20 per cent. The Dominion and Provincial Governments are watching the experiment closely. A saving in labor, time and material is approximately \$2.00 per acre, it is claimed, and an increase in the yield from two to eight bushels.

More than 1,000,000 tons of peat are produced annually in the Netherlands.

## H. R. H. AT VICTORIA

Photographed in the grounds of the Empress Hotel, Victoria, B.C., on the occasion of his recent visit to Vancouver Island.

### Profitable Wheat Yields

Over \$45 Per Acre Is Realized From This Year's Crop

T. T. Mydland who is operating the Fuxstutway Ranch at High River, Alberta, for George McViney, is engaged at present in threshing his grain and results are proving extremely satisfactory. One 60-acre field of winter wheat produced 2,500 bushels of Turkey Red Wheat which was very high quality and splendid color. Another field consisting of 60 acres has not been threshed at time this was written, but it will yield heavier than the 60-acre field. At prevailing prices the revenue from the fall wheat already threshed amounts to over \$2,000 or getting down to actual figures of over \$45 per acre. Mr. Mydland has altogether under crop 900 acres of the finest crop ever cut in this district, 700 being wheat and the balance oats. He is very pleased with the way the grain is threshing out, and will be a busy man until the work is finished.

### Saskatchewan Butter

Manufacture of Creamery Grade In Year May Reach 15,000,000 lbs.

Dairying in Saskatchewan is progressing in a remarkable manner. Production of creamery butter in September reached the high figure of 1,556,291 pounds, as compared with 997,432 pounds the previous September.

This gain of over half a million pounds for a full month is the largest gain in butter manufactured ever reported in the province in any one month.

It now appears as if the total creamery butter production for the year would reach thirteen million pounds over the high record of 1928.

The total production up to the first month of creamery butter was 11,060,250, as compared with 9,081,063 for the first nine months of 1928.

### More Hog Markets

Compared with receipts of the same month of 1923, hog sales for August at Alberta yards and plants showed an increase of approximately 17,000 hogs, Manitoba of 15,000, Quebec 4,000, and Ontario a decrease amounting to 3,500 head, and the total of the four provinces an increase of 42,000. To date this year the supply totals 738,884 to stockyards and 1,726,150 to packing plants as compared with 637,609 and 273,111 respectively during the same period of 1923, an increase in total of about 400,000 hogs.

Thought She'd Had Typhoid Mother had come in from the farm to visit her daughter in the city. After the kiss of greeting, the mother's daughter's bobbed hair, her eyes opened wide in astonishment. "Well, for pity's sake, Lucy," she exclaimed, "you never even write me you had the typhoid!"

## Welfare Of Our Children Is Question Of Vital Concern To The People Of Canada

The greatest of all the natural resources of Canada is her children, yet as a modern writer has said, "This generation can drive automobiles, fly airplanes, talk by radio, and do many other things, but it is not quite sure that it knows how to bring up children." The automobile, aeroplane and radio are only machines, whereas children are the future of the state. Canada has a beautiful climate but in order to preserve and develop in the highest degree the great resource represented by child life it is necessary to follow certain broad lines.

How is it with our children? This answer is given by the Dominion Bureau of Statistics. The official records for 1923 (the latest year for which statistics are available), show that among children from the ages of one to four years there was a total mortality of 4,460. Nearly half of these deaths of children regarded as preventable—measles, scarlet fever, whooping cough, diphtheria and the group including bronchitis, pneumonia, tuberculosis and "colds." The official figures for the registration year, which includes eight provinces only, are as follows: Measles, 231; scarlet fever, 136; whooping cough, 158; diphtheria, 378; tuberculosis, 212; pneumonia, 779; bronchitis, 67; total, 1,531.

There were numerous other diseases, but 1,321 Canadian children from one to four years of age died from the seven diseases enumerated above.

To prevent children from getting these diseases it is necessary to realize how they get the infection. Every one of these diseases is "passed on" by contact. One member of a family sneezes and scatters innumerable germs into the air, and in this and other ways the cold "goes through the house." Bronchitis and pneumonia "happen" in a similar way. Tuberculosis is a disease that is in all probability "caught" in early childhood. Contact again—just as some one in "colds" and in other ways. Tuberculosis is "passed on" by those who have it, perhaps also through milk. Great care should be exercised to ensure that the cows and the milkers are healthy and clean and that all utensils are spotless.

The other four diseases, namely, measles, scarlet fever, whooping cough and diphtheria, are known as "children's diseases," meaning that children have little protection against them. "They're as we say, 'not in luck'" but get more so every year. If exposed to these diseases under five years of age they will likely take the infection and may die, but if protected against infection till about seven years of age, their immunity will be so much greater that most of them will not take the disease at all. Take scarlet fever, for example. It is very often fatal to a child under four years, but protect that child from infection till he is four years and if he then takes the fever, he may have a bad attack but he will have gained sufficient immunity to save his life. It is the same with measles, whooping cough and diphtheria. Against diphtheria we have the great remedy of anti-toxin. If given at the beginning of the illness the child almost always recovers. It seems probable that we shall soon have an anti-toxin for scarlet fever which will give as good results.

Over 4,000 deaths of children between one and four years is a terrible loss to a country in a year, but Canada suffers two even greater losses. According to the official figures published by the Dominion Bureau of Statistics 1,243 mothers died by childbirth, or 24 every week in Canada in 1922; and the mortality of infants (those under one year old), for the same period was 52,222, or 490 a week. The maternal mortality of Canada is 45 for every 1,000 births, or nearly twice as great as that of England and Wales. Our infant mortality is 101, or more than twice that of New Zealand.

Can. Canada Afford to lose 514 mothers and 4,990 babies every week? To spread abroad information as to the best means of reducing the death rate from the causes named above, the department of health publishes instructive literature on different aspects of the problem, which is issued

free to those desiring it, and assists in various other ways the provincial health authorities in bringing home to the people the greatness of this human resource and how it may be preserved.

### Shade Tree Insects

And Their Control

Thirty Varieties of Insects Doing Injury to Shade Trees in Prairie Provinces

According to the Entomological Branch of the Dominion Department of Agriculture, no less than thirty varieties of insects are doing injury to shade trees in the prairie provinces. In Pamphlet No. 47, "Injurious Shade Tree Insects of the Canadian Prairies," by J. J. DeGryse, the insects comprising the list are grouped according to the species of tree they attack. Each insect is described, and in most cases illustrated. No list of identification is made comparatively easy. As the effectiveness of the control agency depends on the nature and feeding habits of the insect, identification is the first important step. For leaf-eating insects, poisons that are sprayed on the foliage and taken into the stomach along with the food are most effective. For plant lice and scale insects which are nourished by juices sucked from below the surface, stomach poisons are of no avail, and it is necessary to employ and irritant poison applied to the insect itself.

There is a third group of insects doing injury to shade trees, namely borers. These are difficult to control, but are not so numerous as the other kinds. Trees that are badly infested should be removed and burned to prevent the spread of this pest.

The formulas for the respective methods of treatment are given. Arsenate of lead is recommended as the most dependable stomach poison, while for contact sprays, kerosene emulsion, nicotine sulphate and miscible oils will be applicable. The pamphlet will be sent free to those applying for it to the Publications Branch of the Department of Agriculture, Ottawa.

### Feed For Poultry

Crushed Oats vs. Mixed Dry Mash For Breeding Hens

An experiment was tried during 1923 at the Lethbridge, Alta., Dominion Experimental Station, of crushed oats versus mixed dry mash for feed for breeding hens. The mixed mash used consisted of one part bran, one part shorts, one part middlings, one part beef meat, one part corn meal, and one-half part ground oats. Both the crushed oats and mixed mash were fed in hoppers as dry mash, two pecks of ten hens and one cocklebird receiving each kind of feed. Beef meal, charcoal grit and shell were available in hoppers in each case. A table given in the annual report of the superintendent at the station shows: Crushed oats, fertility, 71.8 per cent. and fertile eggs hatched 44.9 per cent.; mixed dry mash, fertility 73 per cent. Fertile eggs hatched 63.5 per cent. It will be noted, says the report, that both better fertility and hatching ability were obtained from the mixed mash, but this, it is added, may be due in a measure to the fattening tendency of the oats, and its lack of exercise on the part of the birds eating oats, as oats seemed to satisfy their hunger and they would not work for scratch feed.

### Saskatchewan Breeders' Directory

The 1924 edition of the Breeders' Directory, recently issued by the Saskatchewan Livestock Association, has been compiled with thoroughness and accuracy to assist the breeders of pure-bred stock in Saskatchewan. This directory gives a list of the officers of the livestock associations of the province as well as a complete list of the paid-up members of the various breeds and classes of livestock and should be of service to those who wish to purchase or trade pure-bred stock of any kind in that province.

### The Kind That Stretches

Stretches. "What kind of candy do you want, little boy?"

Boy: "Something thin for a cent, so I can give my little sister one."

(Continued)

"No line," she answered regretfully, after a moment's thought. "None at all, unless—there's a young woman who met up the creek, a missionary's relative, I believe. I saw her speak to him one day on King Street and, of course, he had to stop. He met her when he was just plain Barton Caswell and was out prospecting. From her uncle, she learned of the wrongs being done by the Montreals, but until that uniform fell into his hands, he did not conceive any way of getting the best of them. Perhaps these missionary folks can help you."

Evidently Bart had played his cards with the skill of an expert, thought Seymour. From the widow's impassioned admission she held no grudge against the Dupuwer girl. There had been no hint of a slur upon the woman mentioned the younger, prettier woman. All this suggested that she must have had implicit faith in the creek's love for her.

Declaring his intention of looking up the mission folks, the sergeant returned to the subject of the lost and she asked no further about the nature of it.

"I purely did, but his answer was always the same. 'Richer than gold, Marge, richer than gold.' He said he'd be the first mounted policeman in the history of the Force to make a clean-up, even if he was only one for a week. This stroke was to mean luxury for me, a home in an orange grove in California, diamond rings set in platinum, the dresses—everything! I think this morning, when he rode out so bravely, that he hoped to come back to Gold. The last I saw of him was in the creek, you know, and Alaska is still farther on. Any hour the real sergeant—who has turned out to be you—might have ridden in, as, in truth, you did."

Satisfied that the bandit's widow withheld nothing worth while, Seymour was anxious to be off about the invitation which Ruth Dupuwer had "dotted" to him. He felt, however, that he owed Bart's widow something for the information which, once she started to impart it, had been given so frankly. He was minded to pay at once, even if the coin thereof was only good advice.

"For the present, you had best sit tight here and say nothing," Mrs. Caswell, he began. "I suppose it is easy come, easy go with Bart; that leaves you practically nothing. From what I've seen of you, my husband is right, you have a paying proposition in the restaurant. I don't see any reason why you can't go on with it."

"But when people know—"

## ASK THIS HALIFAX NURSE

**She Is Willing to Answer Letters from Women Asking About Lydia E. Pinkham's Vegetable Compound**

Halifax, Nova Scotia.—"I am a medicine nurse and have recommended Lydia E. Pinkham's Vegetable Compound to many women who were children, also to women who need a tonic. I am English and I am American, and he told me of Lydia E. Pinkham while in England. I would appreciate a copy or two of your little books on women's ailments. I have one which I keep to hand. I will willingly answer letters from any woman asking about the Vegetable Compound."—Mrs. E. M. Conway, 24 Union Street, Halifax, Nova Scotia.

**Could Not Sleep Nights**  
Dublin, Ontario.—"I was weak and irregular, with pains and headaches, and could not sleep nights. I learned about Lydia E. Pinkham's Vegetable Compound by reading the letters in the newspapers and I was willing to get better. I have got good results from it and I feel a lot stronger and am not troubled with such bad headaches as I used to be and am more regular. I am gaining in weight and the time and I tell my friends that the medicine I am taking. You may use my letter as a help to others."—Mrs. JAMES MACDON, Box 12, Dublin, Ontario.

W. N. U. 1646

"Maybe they never know that Bart was anything but a boarder," Seymour interposed hopefully. "You seem to have guarded your secret well when even infuriated old Cato didn't suspect your meat of being more than a mutton."

The little woman had been too distressed to give thought to her own future; naturally the second uncertainty about it. Then suddenly the flame of that love which was beyond Seymour's comprehension, but within his appreciation, flared to decision.

"But they will have to know," she said. "I'll not have the world think he killed that double-crossing stage driver in anything but defence of his own life."

Here was complication which disturbed the plans that the Montreals, impelled by the rugged objection that every person was entitled to a square deal, had been making for her. She had no time to argue with her own wish to impress her with what was vital to his own operations.

He could wait a better advantage toward the capture of Bart's slayer if the double unmasking was delayed. He was to say no more until he had given her leave was his for the asking. The town folk would probably arrange an appropriate funeral for the dead "sergeant," she would need to attend as a sorrowing acquaintance, but she must keep a tight rein on her emotions if she wished to aid in the capture. In this, official thought, Mrs. Caswell promised to do her best.

As he arose to leave, he offered her his hand. She reached out her small one timidly. "I never thought I'd be shaking hands with you," she confessed, "in a murmuring voice, 'I'm afraid I've hated you wearers of the scarlet.'"

"I'm afraid of all sorts of getting the men you went after," she said. "I never knew when Bart would fall into your clutches. But now—"

"That's all right, m'am. You've helped a lot and I only hope I can get something out of it." He started for the door, but remembered one thing more. "That war bag of mine—I suppose Bart took it to the hotel when he moved. I'll be needing the old uniform for this mystery is cleared."

"The bag is still upstairs," she said quickly. "Bart only took some documents and papers besides what he wore. He didn't know but what his identity would be questioned when he suddenly changed from a mining expert to a policeman."

"And the room—I'll rent it?" She shook her head.

"Then, if you'll accept me as a tenant and the room—I'll rent it?" She shook her head.

"I couldn't think of taking rent from a man who was working out my revenge," she said.

Seymour frowned. "I'm seeing that you're done, madam," he said, referring to her use of the word revenge. "I am teaching Gold the value of human life. And I'll pay for the room—the usual rate."

To escape further discussion he hurried out the fall night. Pondering the marvelous complexities of the men met at a day on the "Last Front," he nearly plumped into a mud hole which lay out front. He felt the shock lay a beaten path; this he followed. At the corner he was edging into the vacant lot which adjoined, when, without a splash of warning, something blacker than night fell over him.

Instinctively he struck out at this blackness, his knuckles denting a yielding substance that had a fibrous touch. Before he could throw off its enveloping folds, he felt a pair of strong arms go round his waist and he was closed in as with a gathering string. The covering evidently was a horse blanket, judging by the smell.

As a sudden surge of fury against such artful man-handling lent him strength to break about his heavy blow, he fell upon the back of his head. He felt his knees weaken under the shock of it, but claved and strained to break the hold about his waist. A second hammering blow descended. His ability to struggle failed him. His knees gave way. He was sinking into vast depths. The Gold garrotter, whoever they were and whatever their object, had got him. "Scarlet" Seymour was out!

— CHAPTER XX —  
— Morning's —

The awakening of Sergeant Seymour was painful; never before had he known that a head could ache with the throes that were wracking his. Presumably his mind took hold of a fragment of the horse-blanket. Upon this, after a mental struggle, he was able to spread a picture of his sorry going-out at the hands of some mining camp thugs, doubtless intent on robbing him.

His next wonder was why he had awakened him and by way of answer, he opened his eyes for a look around, the greatest surprise of which was broad daylight. The sun, then, must have served as his alarm clock—called him out of that night which was darker than any he had ever known before. Now he lay reeling in a room into a cabin room in which he lay fully clad, upon a straw-stuffed bunk.

He did not bother to get up just then; he merely lay back on the inadequate pillow of his slouch hat and listened to the ache of his head. The idea that he had been robbed perished. To his surprise, he found that the currency belt around his waist had not been disturbed. Surely mining camp crooks would know where to look for his valuables!

Then he did his right hand over his chest to feel the holster that hung beneath his left arm. Greater surprise!

His gun lay ready in its usual concealment.

The conclusions, painful in their process, were at once comforting and disturbing. He had not been trimmed or even fished. Robbery could not have been the motive behind the attack outside the widow's restaurant. Then—what?

Slowly he raised himself to a sitting position upon the bare bunk and perched his eyes to reveal until they settled upon another aspect of his disturbed comprehension. This was found in the narrow window through which the sun was streaming from bars crossed the opening. He must be a prisoner in jail.

"Deputy Sheriff Samuel Hardley, the strong arm of the law!"

He swung his feet to the floor and took a somewhat wobbly stand. Further survey convinced him beyond doubt that he was in the blundering deputy's one-cell bastille. This proved to be built of logs with a door as thick as that of an ice box and studded with nails. The two windows were near the log ceiling, narrow, oblong and barred. There were three bunks along the many walls and a Yukon stove in the cell's center—no other furnishings, but enough for a frontier

So, that was the lay of the cards, he mused darkly—the explanation of the surprise attack. After their talk in Brewster's room at the Bonanza, the fat deputy must have located Kaw and his party and decided to rob them of his 30-30 rifle which he had left in the stable. Hardley had realized, then, that the deputy's plan of robbery of the clews would have put his man on guard. Learning that Seymour, supposedly a mounted policeman, had been in the stage, was in the restaurant he had made ambush and effected his arrest without a shot being fired.

There the deputy's caution seemed to have stopped, thought the sergeant. A bottle that stood on the shelf near his gun. Neglect to search his prisoner was quite in keeping with their sharp preparation for the brandy and brandy had made. Seymour must have to give Hardley credit, however, for effective action. The deputy and his men, with a blanket, as he remembered it. Full assurance on this point awaited the deputy's explanation.

Almost at once he remembered the thing—a worn horse-blanket. Possibly the deputy had covered him with it before looking him in and, in the restlessness of that impelled slumber, Seymour had kicked it off.

A bottle that stood on the shelf near the stove invited inspection. Even before he picked it up, the stars on its label proclaimed the brandy and brandy smell which at its neck burred forth.

If Hardley had been fortifying his courage with such potent stuff, it was no wonder he overlooked the gun. A drink of the liquor must have been standing in the deputy's mind. The deputy's arrival at the jail. Lifting the stove top, he permitted the pint which remained in the long ago fire into the hands of some long ago burglar.

Seated on the edge of one of the bunks, he took stock of the situation. He had missed the late-night appointment at the O'Malley cabin on Glacier Creek. The missionary folk would think, probably, that they had left too much to his intuition in their excess of caution. That, however, meant only delay and while hours were precious, he would make up for lost time once freed of Hardley's detaining.

It began to look as though he was not a huge success as a plain clothes man. He had taken off his mask for Bart's widow. Ruth Dupuwer evidently believed him to be a constable come to aid the murdered "sergeant." Now it seemed likely that he would be forced to make a confidant of the talkative Hardley in order to be able to carry on at all. If Bart had not made the uniform a conspicuous target for one bad outfit of that region, he'd be tempted to at once climb into the scarlet which the bandit had left unworn. Never had he liked under-cover patrol, but in this particular case, he felt that "civies" were essential.

An hour had passed since his awakening and he was beginning to wonder when the obese deputy fed his prisoners at his performance boarding house. If the surprise taken from the half-filled bottle of "Four Star" had been freely partaken, Hardley might sleep late that morning and awaken with "head" that would make his visit to the guard house a second thought.

(To be continued)

High-Toned  
"Walter, what is this on the bill?"

"Bungleson stuff, sir, at 40 cents a pound."

"But what is it?"

"Formerly cottage pudding, sir, at 15."

### Coronet Has Strange History

Made By Greatest London Goldsmith For Coronation of George IV.

The market for coronets is not what it used to be in England. Reposing in a Mayfair antiquary's shop is a perfectly good one waiting to be restored to its rightful owner, or go under the hammer to the highest bidder, although neither seem likely to appear.

This particular piece of all but obsolete headgear has had a strange history and has been sold and resold by all sorts of people, many of whom didn't even know that it was a coronet. Its present owner had it from a man who offered it for sale as a "pointing," a product of the old fish-goldsmiths of the seventeenth century and earlier.

But when it was polished up it was found to be a sample of the work of Paul Storr, the greatest London goldsmith of the last century, and the hall mark shows that it undoubtedly was made for the coronation of King IV.

At the coronation of the late King Edward fully two-thirds of the peers present were without coronets. The war also has intervened, bring greater democracy in the manners and the exercise of their prerogatives by peers.

The late Lord Aylesbury, of "Pellican Club" memories, once confessed that one of his first aims when he came into the family possessions was to pawn the ancestral coronet, and he never took the trouble to redeem it. "What on earth do I want with a coronet?" he used to ask.

### The Great Teacher

Experience Remains the 'Greatest Factor in the Progress of Life'

Most Americans get their schooling between the ages of six and sixteen, says Prof. Dallas L. Sharp, of Boston University. That is true. But most of us do not begin to get our real education until we leave school. Experience remains the greatest teacher. Then a school graduate strikes out in the world for himself, one of the first things he has to do is to learn much of what he has been taught. The delusion that takes most time to get out of the head is youth's inflated conception of the possibilities of success.—Bangor Commercial.

### THE FALL WEATHER HARD ON LITTLE ONES

Canadian fall weather is extremely hard on little ones. One day it is warm and bright and the next wet and cold. These sudden changes bring on colds, cramps and colic, and unless baby's little stomach is kept right, the result may be serious. There is nothing to equal Baby's Own Tablets in keeping the little ones well. The sweetest At stomach, regulate the bowels, break up colic and make baby happy. The Tablets are sold by medicine dealers or by mail at 25 cents a box from Dr. Williams' Medicine Co., Brockville, Ont.

A husband who overcomes his wife's fits of temper by means of confessions speaks in glowing terms of the sagging process.

MRS. HARVEY DISHAM

### LITTLE HELPS FOR THIS WEEK

Whatever ye would that men should do to you, do ye even so to them.—Matt. vii, 12.

Do not look for wrong and evil, You will find them if you do; As you measure for your neighbor, He will measure back to you.

Look for goodness, look for gladness, You will meet them all the while; If you bring a smiling visage,

To the glass, you meet a smile.

—Alice Cary—

Man must become just and good through a just and good word of treatment. Good must call for the good. This reminds me of that beautiful Swedish legend of the Middle Ages—about the youth who was changed by a witch into a wolf—but who at the sound of his Christian name spoken by a loving voice, would recover his original shape.

—Fredrika Bremer—

Jupiter's diameter is about 10 times that of our earth, but so quickly does it spin that it has only 10 hours and 40 minutes.

It spins that it has only 10 hours and 40 minutes.

It spins that it has only 10 hours and 40 minutes.

It spins that it has only 10 hours and 40 minutes.

## OUTLINE PLANS FOR TRAINING OF BOY IMMIGRANTS

Winnipeg.—The Salvation Army will in future give the immigrants brought from Great Britain to Canada a practical training in agricultural work, especially young men and boys, according to plans outlined here by Commissioner David Lamb, of London, England, chief of the army's emigration department.

Three plans are now under consideration for the 1928 season, and arrangements have been made for the allocation of \$250,000 from the general funds to carry on the work. The army, which already has a training farm at Brandon, Manitoba, is negotiating for the purchase of the Little, Manitoba, demonstration farm from the Provincial Government. The schemes outlined were:

(1) Boy emigration; (2) young man emigration; and (3) family emigration in groups. Commissioner Lamb explained that the boys would be given training in England and then would be distributed from the Brandon farm to agriculturalists in the west. The second scheme will provide for training of young men between the ages of 18 and 20 on the army's farms in the west, and the third will provide for the training in communities of from 12 to 20 families. The facilities will be housed in separate buildings and will be given from 10 to 12 cattle to each family. Commissioner Lamb said: "We shall start them off with everything, and to help them to be self-supporting, they will take half the food, and we will retain the other half." These families will be trained from three to five years.

## Community Chest Fund Will Be Considered

Scheme Laid Before Board of Control At Ottawa.

Ottawa.—A scheme for the creation of a community chest fund or federated budget, for charity purposes, along the lines of the Winnipeg Foundation Fund, has been laid before the board of control by Controller Arthur Ellis and will be considered at a special meeting.

Controller Ellis states that the city solicitor has prepared a draft of legislation that would be needed to enable the fund to be created, and he felt it a propitious time to authorize getting the approval of the Ontario Legislature.

## Saskatchewan Legislature

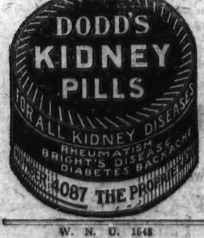

Opening Date of Fifth Assembly Fixed For Nov. 13

Regina, Sask.—The framing of new liquor legislation will be the principal business of the Saskatchewan Legislature which opens Thursday, Nov. 13. Announcement of the opening date of the fifth session of the fifth Saskatchewan Legislative Assembly was made tonight.

The attorney-general has been busy preparing the draft of the new liquor legislation for some time, and it is now practically ready for submission to the legislature. "The provisions of the new bill are being kept a close secret."

## French Wheat Crop Larger

Ottawa.—A cablegram received from the International Institute of Agriculture, Rome, states that the official preliminary estimate of the wheat crop of France is 385,240,000 bushels, compared with 375,572,000 last year. The rice crop of France is 39,880,000 bushels, against 24,517,000 in 1925.

## Ratification Of Treaty Between Canada and Belgium

Ottawa.—A ceremony, which is almost without parallel in the history of Canada, took place in the office of the prime minister here, when ratifications of the commercial treaty between Canada and Belgium were formally exchanged. This is the final act in the conclusion of the first treaty to be signed in the Dominion capital. The ratifications were exchanged by John Van Ryckholt, of Montreal, senior consular representative in Canada of the Belgian Government, and Hon. James A. Hobb, acting minister of finance for Canada.

## Twenty-Two Years In Solitary Confinement

Fanatical Enmity of British in Holy War Has Been Released

Montreal.—A special cable published by a local newspaper announces that Osman Digma, infamous in the days when the Mahdi was waging his holy war against the British in the Sudan and who was captured three years after the battle of Omdurman, when Lord Kitchener finally subdued the fanatical Derlishes, the followers of the Khalifa, has been released after 22 years of solitary confinement from a cell at Wadi Halfa. Osman is on a pilgrimage to Mecca.

According to the cable, the British Foreign Office had forgotten all about Osman until the question was raised at the last session of parliament.

During Great Britain's Sudanese troubles in the last quarter of the nineteenth century, Osman was one of the most fanatical, most persistent and cunning of the British enemies.

It is said that he is now nearly 100 years old.

## Would Isolate Addicts

Segregation Advanced As Only Cure For the Drug Evil

Saskatoon.—Segregation of addicts as the only cure for the drug evil was advanced here by P. N. Cowan, of the Dominion Department of Narcotics Investigation, speaking before the Social Welfare Congress. Mr. Cowan said that Canada had the strictest laws of any nation to fight the evil.

Brother Barbate, director of boys' work for the Roman Catholic Church, told the congress he would like to see elderly men who now spend their time on golf links, take the leadership of groups of boys. In this way, he said, they would find greater happiness and be a real service to the community.

## Heavy Freight Traffic

Railways of Canada Exceeded Record During 1925

Ottawa.—Freight traffic during 1925 was the heaviest ever handled by the railways of Canada, according to Bureau of Statistics returns issued. It aggregated 102,258,933 tons of revenue freight, and 34,697,658,527 ton miles, making the average distance each ton was carried, 332 miles. The previous high record was made in 1920 with 31,894,411.473 revenue ton miles. Passenger traffic was nine per cent heavier than in 1925, but was still below the records made in 1919 and 1920.

## Japan Studies Poison Gas

Tokio.—The Japanese navy, following the example of the army in instituting the study of new offensive weapons, will establish shortly a special board of poison gas research. The army and navy will co-operate in this work.

## May Revolutionize Surgery

New York.—Gastric surgery may be revolutionized by a new method of operation, according to Dr. H. B. Deane, of Melbourne, Australia. The treatment is based upon experiments with sulphur.

## Holland Buys Planes

Amsterdam.—The Government of the Netherlands has ordered 13 high speed scout planes, and 18 two-seater planes for artillery observation. This military equipment is to be delivered in 1928.

## Elsie Kipling Weds

London.—Miss Elsie Kipling, daughter of Rudyard Kipling, was married here to Captain George Hambridge, honorary attaché to the British Legation at Brussels.

## Would Establish Republic

Vincente Blasco Ibañez, Spain's noted author of the "Four Horsemen of the Apocalypse," has opened his campaign for the inauguration of a Spanish republic. He blames the King for Spain's having fallen on evil days.

## 28th Battalion Re-union

Old Comrades To Foregather in Regina On Nov. 1 and 2

Regina.—The 28th Battalion, G.E.F., of the hard-fighting Royal Sixth Brigade, is to hold the re-union of its members at Regina on November 1st and second. An excellent programme has been arranged, including a theatre party, banquet and concert on Saturday the first, and a church parade on Sunday the second.

Members of the unit are scattered far and wide, and the addresses of many are unknown, and for this reason it is impossible to send a personal invitation to the majority of them. The committee in charge, however, are endeavoring by newspaper notices and radio broadcasting, to advertise the event as much as possible, and request that every former member of the battalion who receives this or any notice of the re-union, accept it as a cordial personal invitation to be present, and to notify all other members of whose whereabouts he knows, to make a very special effort to come.

Special railway rates are being arranged. Single fare tickets to Regina should be purchased, and a station certificate requested from the local ticket agent. When this is presented to the railway agent at Regina, a reduced rate will be given for the return trip.

It is ten years ago since the battalion mobilized in Winnipeg on Nov. 1, 1914.

## Smuggle Grain To Canada

American Wheat Said to Have Been Brought Illegally to Obtain Higher Prices

Winnipeg.—An extensive system of grain smuggling from North Dakota and Minnesota to Manitoba points is being carried on this year, according to information obtained here. The price of wheat is several cents higher in Canada, and this has proved an inducement to many south of the line to get their grain sold through the Winnipeg market. In former years conditions were the reverse; prices were higher in the United States, and grain was smuggled in from Canada.

Discussing the situation here, P. A. Lee, secretary of the North Dakota Grain Dealers' Association, said efforts had been made last spring to get the co-operation of government officials to stop the smuggling, but that little action resulted from the negotiations. The smuggling of grain from one side of the line to the other is a yearly occurrence, said Mr. Lee.

## U.S. Navy Explosion

San Francisco.—Four big names were added to the list of dead from the explosion aboard the cruiser Trenton in Hampton Roads on Monday. Of the six surviving members of the turret crew on duty at the time of the disaster, four still are believed to be a critical condition.

## Back Sore?

Rub well with Minard's. It penetrates and takes out stiffness.

## How League of Nations Protects Small Countries

Geneva.—The permanent Albanian representative of the League of Nations has officially brought to the attention of Sir Eric Drummond, secretary-general, a dispatch from the Albanian Government concerning the alleged territorial designs of Jugo-Slavia on Albania. The League Secretariat took the matter under advisement. The incident shows that the league is being used more and more as machinery for airing the grievances of small states, which fear absorption by the larger ones.

## Press For H. B. Road

Large Representation to Wait on Premier King at Regina

Regina.—The necessity for the completion of the Hudson Bay Railway (the earliest possible moment will be pressed upon Premier Mackenzie King during his visit to Regina by a big delegation representative of all classes in Saskatchewan, says the Leader.

In addition to the city members of the City and County Association, the following organizations have been invited to appoint representatives to serve on the delegation: Saskatchewan Agricultural Co-operative Association; Saskatchewan Stock Growers' Association; Saskatchewan Horse Breeders' Association; Saskatchewan Cattle Breeders' Association; Saskatchewan Swine Breeders' Association; Saskatchewan Agricultural Societies' Association; Farmers' Union of Canada; Saskatchewan Grain Growers' Association; Saskatchewan Livestock Association; Saskatchewan Co-operative Elevator Company, Limited; Saskatchewan Wheat Pool; Saskatchewan Registered Stock Growers' Association; Saskatchewan Co-operative Creameries, Limited; Saskatchewan Co-operative Wool Growers' Association; Saskatchewan Rural Municipal Association; and the Saskatchewan Sheep Breeders' Association. The delegation will wait upon the federal premier early Monday forenoon, November 3.

## Manitoba Grain Crop

Threshing Is Now Well On Way To Completion

Winnipeg.—A few more days of fine weather will see the Manitoba grain crop safely threshed. It is estimated by the provincial department of agriculture. The protracted spell of wet weather caused little damage to the crop, according to the department's statement, though there was some loss through sprouting in the sheaf and from bleaching. Threshing now is in full blast everywhere and in southern and central areas is well on its way to completion. It is thought the cropless freeze-up is late there will be comparatively little fall plowing done.

## Japan Plans World Flight

Start Would Be Made in Spring Of 1925

Tokio.—Plans for a Japanese round-the-world flight are now in preparation by the Imperial Aviation Society and the Government Aviation Board. It is proposed to select two civilian aviators for the attempt, and to construct the machine at the Nakajima Aeroworks at Nagoya. The start would be made in the spring of 1925. Funds for the attempt may be raised partly by popular subscription and partly from government appropriations.

## Celebrated 100th Birthday

Vancouver.—Dad Quirk, Vancouver's grand old man, celebrated his 104th birthday, Oct. 22. He is as hale and hearty as ever and continues to work at his trade of saddlemaking. "Early to bed, early to rise, and a lot of hard work," is Dad's recipe for a happy, healthy life. Every morning finds him hard at work at his bench.

## French Recognition of Soviet Delayed

Paris.—The recognition of the Soviets, which was semi-officially announced for Friday, Oct. 17, is now understood to have been delayed by the Russians themselves. Moscow, it is said, has indicated through French supporters that even such reservations concerning debts will not be tolerated in the act of recognition.

## MAY SUSPEND RECENT ORDER ON FREIGHT RATES

Ottawa.—The western freight rates situation continues to be actively to the front in Ottawa, and it was discussed at a recent Cabinet Council. While no conclusion was announced, it is known that some of the ministers favor the order of the railway commission being suspended until the legal status of the case and the jurisdiction of the railway board are disposed of by the Supreme Court. It is considered that this would remove the doubt, that arises from the divided conclusions of the railway commission.

The government has the right to suspend the commission's order and had been asked to do so by the governments of the three prairie provinces, but if this procedure should be taken it would be an interim process pending the issue of the appeal to the Supreme Court.

The intention heretofore had been that notification of any kind will not be taken until the prime minister returns on November 10, meanwhile the railways propose to withdraw the Commission's rates unless stopped by order-in-council, and some of the ministers favor. Premier King and his colleagues in the west are being communicated with in regard to this situation.

## Disputes Russian Claim

Former Dowager Empress Says Cyril's Action Was Premature

Paris.—The recent manifesto issued at Berlin by Grand Duke Cyril of Russia declaring himself Emperor of all the Russians, is disputed by the former Dowager Empress of Russia, Maria Feodorovna, in a letter to Grand Duke Nicholas Nikolaievich, who is now living in France.

The former Dowager Empress says that Cyril's action was premature, since she still hopes that the Russian royal family is not dead. She addresses Nicholas at "the eldest member of the House of Romanoff," and says "our future Emperor will be designated by our fundamental laws, in union with the Orthodox Church and the Russian people."

Grand Duke Nicholas, in publishing the letter, appeals to all Russians to carry on the holy task of the liberation of Russia.

## Gift For Retiring Officer

Department of Immigration in Many Lands Honors Officer Official

Ottawa.—W. D. Scott, who retired as assistant deputy minister of immigration and colonization, June 30, was presented with a solid silver tea service and tray, and an illuminated address by all the employees of the department in Canada, the United States, Great Britain and on the continent of Europe.

Mr. Scott played a prominent part in the colonization of Western Canada, his first active work, being when he held the first section of Canadian Pacific Railway land, near Brandon, in 1881 for \$2.50 an acre, subject to a rebate of \$1.25 an acre for the area brought under cultivation within three years. The purchaser was the late Charles Whitehead, father of the present editor and owner of the Brandon Sun.

### What the Preacher Said.

The story is told of Helen Hunt, the famous author of "Ramona," that one morning after church service she found a purse full of money and told her pastor about it.

"Very well," he said, "you keep it and at evening service I'll announce it," which he did as wise. "This morning there was found in the church's purse filled with money. If the owner is present, he or she can get to Helen Hunt for it."

And the minister wondered why the congregation tittered.

## Watchmen Who Never Sleep

Top left—Shows how they guard the approach to the Nelson House Pass. Right, the passage through the Pass itself, and the Puller Tunnel below.

Comparatively few of the thousands of miles of railroad in Canada are electrified, but there is no railway organization which does not rely to a greater or lesser extent on electricity as an aid to efficient operation and service. Electricity plays an important part in all of the great Railroad Shops through the country. Street cars and cars are operated by power directly transmitted or stored in batteries. Bridges are operated, and a thousand and one electrical devices are in constant use which beside being labor saving do away with the human element which might make for inefficiency. Numbered among these are the automatic Block Signals which one finds distributed along the line of the Canadian Pacific, and notices particularly in the Rocky Mountain passes where they are more urgently required.

To the average layman an automatic signal is just a signal, and the general public is only interested in it because it gives added protection, or rather eliminates possible danger from the portion of track which it governs. To the railroad official it is more. It acts as watchman against broken rails, open switches, a fouled track or any

other obstruction. Through a circuit in the rail take is accomplished, and if the circuit be broken, for the reason that another train is occupying the block, or that there is an open switch, a broken rail, without or other obstruction, then the train approaching the signal may not pass. And while it awaits a through signal, trains following in the rear may not approach for the reason that they are also stopped by an automatic signal which will not release them until the preceding train has passed from that section of the track which they desire to enter. A perfect system. No electrical circuit—no through signal—no train may pass.

The value of this system in the Rockies can hardly be over-estimated. Not only is labor saved, but the company is able to ensure absolute protection.

### Stony Plain and District.

On Oct. 16, to the wife of Mr. H. H. Baron, a son.

On Oct. 18, to the wife of Mr. P. H. Baron, a daughter. Mr. August Kroye, who underwent an operation in Edmonton last week, is expected back home in the course of a few days.

A big shoot is being arranged for Saturday afternoon next at the Little range. The townspeople will be out for a practice on Monday afternoon.

Keep in mind the Rifle Club dance in Stony tomorrow (Friday) night. Martin's famous orchestra will be present, and should draw the usual big crowd.

Threshing is still proceeding on some farms in this district, with the end of the season in sight. The shower Sunday morning did not cause any delay, as the stocks were in shape for threshing Monday morning.

The Ladies Aid of the Presbyterian Church at the Grove entertained a large number of their friends last night to a Halloween party. The hall was filled and everybody had a good time.

Spruce Grove Councillors met on Monday afternoon last at the Grove, with Reeve Schulz in the chair.

Meredith Brothers shipped a car of hogs from Duffield on Tuesday.

Caveats are said to have been issued on the lands in arrears in the municipal district of Inga.

The secretary of Inga M.D. has notified the Councillors their next meeting will be held at Edmonton Beach tomorrow. The Councillors will make a personal survey of the roadwork in dispute in that locality.

Work was started on Saturday on raising the Inga bridge in front of Mr. Powell's residence. This will be raised some ten feet, making the slant on each side much more easily to negotiate. The bridge gang moved here from Glory Hills, where they had re-built the bridge near the Webber ranch. When finished at Inga the gang move on to the bridge in Mewassin district.

The number of incendiary fires this season on the farms in Winterburn district is causing some uneasiness among the residents there. On Saturday last another fire of supposed incendiary origin burned a farmer's set of buildings, team of horses, three cows, and 100 turkeys and feed. At the latter fire, while the ruins were still smouldering, a half-breed picked up some logging chains, etc., and made off with the junk, but was captured later by Officer Smith.

Tires and tubes vulcanised and repaired at Stony Plain Garage.

A supply of licenses—bird game, big game, and trappers—has been received at The Sun office, and may be had at any time.

Help us make a bigger and better Sun each week by phoning or sending in any local news item. We print Wednesday afternoon.

### Big Night at Holborn.

The concert Friday evening last at Holborn Hall was a very pleasing affair, and the best held in the district as yet. The City performers were supplemented by some of the best local talent, and these performed exceptionally well and received hearty encores. The City performers numbering over a dozen left nothing to be desired, and the Highland Fling and Irish jigs and reels and the many topical songs were thoroughly enjoyed; the performance of one wee Miss of some four summers was a real treat in her charming song-and-dance sketch.

The selections by the full orchestra were especially good and spoke volumes for the good leadership of Mr. Martin. A return engagement of the same troupe will certainly be welcomed by all who had the pleasure of hearing them Friday.

The dance which followed was patronised by the usual good crowd, and all had a pleasant time tripping the light fantastic to the excellent music provided. Stony was represented by a goodly bunch of its best sportsmen, with four or five carloads of visitors from Edmonton.

### W T Henry Elected.

At the by-election in Edmonton on Tuesday, Henry, the Liberal candidate, got 4626 votes; A. F. Ewing, Conservative, 4220; H. H. Bartholomew, Labor, 4179; G. V. Pelton 1122.

### Frank is Some Broadcaster

We notice by the daily press, says the Red Deer News, that Hon. Frank Oliver is going to talk to Mackenzie King about the freight tariff. Without prejudice, we honestly think that it would be discreet for the press to be under the barn during that interview.

### Ontario Stays Dry

The vote in Ontario last week on a change in the Temperance Act proved quite a disappointment to the Wets, the Act being sustained by a majority of 40,000 all over the province. The Wets succeeded in reducing a majority for the Act less than five years ago of over 379,000 to this 40,000. Toronto gave a wet majority of 50,000. The other large urban centres also gave wet majorities.

### Here and There

The Earl of Lintbrim, Irish peer, who has been touring Canada, was much struck with the resemblance between north-west Ireland and the maritime provinces, with their wooded hills, sandy beaches and plentifulty of fish and game, as playgrounds for the tourist.

What is believed to be the largest salmon ever caught by hook and line in waters adjacent to Vancouver, B.C., was landed at Horseshoe Bay, Howe Sound, recently by A. C. Cohen. The fish measured four feet, one inch in length and weighed 64 pounds. It took 35 minutes to land it.

Irwin S. Cobb, the famous American humorist, has been hunting in the St. Maurice valley, served by Canadian Pacific line. This is by no means his first trip to Canadiana hunting and fishing centres, as he is a keen sportsman and has visited the whole of Ontario, Quebec, Nova Scotia and New Brunswick.

Among the passengers landing at Quebec from the Canadian Pacific liner "Empress of Scotland," recently was Miss Margaret Bondfield, M.P., a member of the Cabinet of the Macdonald Government of Great Britain. Miss Bondfield is in Canada to study conditions as they affect female immigrants.

Some interesting facts were made public by E. J. Bellefleur, superintendent of the fish and game department of the Province of Quebec, when in Montreal recently. The province is now teeming with wild life, he says, mainly because of its conservation policy, whereby preserves are rented to fish and game clubs on the understanding that they appoint wardens. There are 600 such clubs employing a total of over 1,000 wardens.

The Trans-Canada Limited, crack express of the Canadian Pacific Railway, completed its last run of the season on September 17th, and will not be operated again until next May. The train, which is the fastest long-distance express in North America, covered 758,748 miles in the season, or three times the distance between the earth and the moon, in its 238 runs, and carried the equivalent of 95,000 passengers for varying distances.

The new wing of the Chateau Lake Louise, the Canadian Pacific Railway's hotel at Lake Louise, one of the choicest beauty spots in the Rockies, is now under construction to replace that portion destroyed by fire some months ago. It will be a nine-story, fire-proof, steel-frame structure of stucco, brick and stone, richly furnished in the best style of a mountain hotel, and will contain 280 bedrooms, bringing the total in the hotel up to 390.

The hunt for fur is extending northward each year, according to officials of the Hudson's Bay Company and Reivillon Freres. They have already despatched their steamers on their annual tour of the northern posts which each season are being located farther and farther north as the field of the fur hunters is extended into the Arctic. The Hudson's Bay Company now has a numerous chain of posts in Baffinland and other areas north of Hudson Strait.

FOR SALE—1 wardrobe, like new; 1 bedstead, 1 heater, sold cheap; 10-20 Case tractor, part cash, balance terms. Apply Henry Giebelhaus NE 12 53 1 w. 6. 22
